

# I3Insight-AD

OPTIMIZE your IT with INNOVATIVE

## ENHANCING YOUR IDENTITY FOUNDATION

Shrinking budgets and workforce reductions have lean IT organizations doing more with less. The effect? General purpose administration, ongoing maintenance, and visibility of the network's overall health all begin to slip. Active Directory is the foundation of any reliable and secure IT infrastructure. We can help your organization regain its identity footing with **I3Insight-AD**.

## MONITORING

Visibility is critical in all environments. By including remote monitoring of your AD infrastructure, you receive proactive alert and event notification on system-related components. In addition, we watch for health and security related items in Active Directory and other related services - providing the insight you need to maintain a smooth-running environment.

## REPORTING

Bring the state of your Active Directory environment to your fingertips using the automated reporting feature. With more than 25 reports (delivered to your inbox) each month, you can follow what is happening in your identity infrastructure.

## STAYING CURRENT

As the foundation of your IT, it's critical to keep Active Directory updated. Staying current with Active Directory allows you to take advantage of new features while enhancing the security of your identity platform. For example, the *Keep Current* feature includes the migration of Active Directory to the current version (once per agreement life cycle). With our ongoing administration of Active Directory and the management of administrative functions, staying current is no longer a concern.

## SEMI-ANNUAL SERVICE REVIEWS

The world of IT can be complex. This is why our semi-annual service reviews are so important. One of our experts will conduct an onsite consultation to review reports and discuss any upcoming events.

## COMPLIMENTARY STRATEGY SESSION
