

I3DR

OPTIMIZE your IT

RAPID DISASTER RECOVERY

IT disasters do not have to be synonymous with business disruptions. When server disaster or downtime strikes, **I3DR** helps restore vital business systems and operations, fast. Additionally, its protection is comprehensive and affordable, eliminating needless effort and costly hardware and software.

With **I3DR**, data centers can protect whole servers - both system and data volumes—within a single bootable recovery environment. An all-in-one, service-based solution, I3DR leverages virtualization to protect both physical and virtual servers, and rapidly recover all workloads with no need for costly, duplicate hardware and software.

Entire Server Replication

Protects the OS, data, and application.

Block, File and Snapshot Replication

Flexible options for data capture.

Protection for 32/64-bit Windows Workloads

Multiple architecture support to fit the needs of your business.

Efficient Workload Protection Over the WAN

Replicate your servers to our data center over a secure WAN connection.

Multiple Recovery Points

Protection from virus outbreaks and data corruption. Most systems just replicate corruption—but not with **I3DR**.

Failback Flexibility

Integrated technology allows for failback to the same (or different) hardware.

Rapid, One-Click Failover

Easy, fast recovery from a failure.

Continuous Health & Security Checkups

Regular tests and proactive recommendations for business infrastructure applications.
