

I3MANAGE FOR SMB CONTRACTORS & CONSTRUCTION FIRMS

Keep projects moving. Protect margin. Secure the systems your crews use every day.

MANAGED IT BUILT AROUND HOW CONTRACTORS MAKE MONEY

Your business depends on getting estimates out, capturing change orders, keeping crews informed, billing cleanly, and accessing core systems from the jobsite, truck, trailer, office, or home. I3Manage supports those priorities with managed IT operations, cybersecurity, secure access, backups, and practical technology planning.

WHAT CONSTRUCTION LEADERS CARE ABOUT

BUSINESS PRIORITY	WHEN TECHNOLOGY GETS IN THE WAY	HOW I3MANAGE HELPS
Billing & cash flow	Invoices wait on missing approvals, documentation, time entry, or access to accounting systems.	Improves continuity around the systems employees use to enter, review, approve, and submit work.
Project schedules	Jobsite teams lose time when plans, drawings, project files, email, or cloud apps are unavailable.	Supports more dependable access from office, jobsite, truck, trailer, or home.
Scope creep & change orders	Field notes, approvals, photos, and change documentation get delayed or lost.	Helps keep project details accessible and protected before missed documentation turns into margin loss.
Re-work & callbacks	Teams work from outdated files, unmanaged devices, or disconnected communication.	Helps office and field teams work from consistent systems, safer devices, and better information access.
Payment fraud & email risk	Compromised email can redirect invoices or impersonate trusted vendors.	Adds managed controls around email, identity, user awareness, and account compromise risk.

WHAT I3MANAGE PROVIDES

MANAGED LAYER	BUSINESS BENEFIT
Devices & users	Covered laptops, workstations, users, and selected systems stay visible, supportable, and easier to manage.
Microsoft 365 & identity	Access controls are aligned to user roles, device trust, location patterns, and business risk.
Secure remote access	Field and office users can connect more safely from jobsites, customer locations, home, or mobile networks.
Backup & recovery awareness	The information your teams use to estimate, communicate, bill, and serve customers receives practical protection planning.
Security monitoring & response	Endpoint, email, access, and security activity are managed as part of a Managed Security Operating model.

BUILT FOR SMB CONSTRUCTION FIRMS

I3Manage is designed for contractors that need more than reactive help desk support, but do not want to add several full-time IT and security specialists to the payroll.

YOU NEED	I3MANAGE OUTCOME
Specialized IT skills	Access to engineering, security, backup, identity, endpoint, and user-support disciplines through one managed relationship.
Fewer technology distractions	Office, field, service, estimating, and accounting teams have better support for the systems they use every day.
Stronger business protection	Managed email, identity, endpoint, backup, vulnerability, and access controls help reduce operational and financial exposure.
Practical technology planning	Leadership receives a roadmap that connects IT decisions to margin, growth, project delivery, cash flow, and risk.

BEST-FIT CONTRACTOR PROFILES

- 15–100 employee contractors with office staff, project managers, estimators, accounting users, and field crews.
- Commercial contractors, construction managers, service-heavy contractors, and growing construction firms.
- Firms that depend on Microsoft 365, project files, scheduling, estimating, accounting, billing, and jobsite access.
- Organizations that must manage cyber insurance expectations, customer due diligence, and payment workflow risk.

SCHEDULE A CONTRACTOR-FOCUSED IT & SECURITY REVIEW

Next step

We review where technology supports or slows down your office, field, service, project, and billing workflows—and identify practical steps to reduce risk and keep work moving.
